Rescue 42, Inc. Introduces the VAULT™ to the Law Enforcement

The VAULT™ makes storage and transportation of equipment convenient and secure.

(Chico, CA) – Rescue 42, Inc. debuted its latest product line, the VAULT™, to assist law enforcement agencies economically transport and deploy essential response gear and equipment. Law Enforcement agencies are continually being asked to perform more functions, over larger territory, with shrinking budgets. The VAULT™ was specifically designed to address these new, leaner operating environments by reducing the need for large, specialty vehicles in emergency/tactical response.

The VAULT™'s versatile chassis enables any vehicle with a 2" hitch to become an emergency response asset and because the VAULT's™ wheels pull up off the ground during transport, it does not have the licensing, speed or road restrictions of a trailer. Once you arrive at a scene, the VAULT's™ wheels descend with the simple turn of the crank allowing the VAULT™ to detach from the vehicle and be rolled wherever it is needed. The chassis rugged running gear and narrow design make it possible to roll over uneven ground and through standard sized doorways and elevators allowing you to bring essential equipment directly where it is needed. "Every response scenario can present unique equipment delivery problems", states inventor and company owner, Tim O'Connell. "My goal is to help agencies spend less time, money and resources on preparing and staging for response which allows them to more efficiently do their jobs".

There are several VAULT™ models available:

The **VAULT™ Incident Command Post (ICP)** serves as a central hub to coordinate people and resources during any incident. An all-in-one solution, the unit is a fully self-powered, self-contained communications and command system. The VAULT™ ICP opens to create a desk with drawers and shelving and incorporates all of your essential command gear including radios, scanners, computer, monitor, fax/printer, and more.

The **VAULT™ General Purpose Box** is a large, weather-resistant, Aluminum cargo box with a lockable, diamond plate top, ensuring your gear stays safe and secure no matter where your VAULT™ goes. The box is perfect for storing and transporting everything from tactical response and riot gear to event/crowd management supplies. Optional inserts include SCBA/SCUBA cylinder carriers, dividers and rackmounts.

Because of the VAULT's™ compact design, they can be easily and securely stored in fleet bays, garages, sub stations, precincts or even in a closet. Always at the ready with "never flat" solid urethane tires, any officer can attach a VAULT™ to a 2" trailer hitch for immediate response. "We anticipate that the VAULT™ will become an essential incident management tool for any number of response situations from parades, concerts and rallies to hostage incidents and school emergencies", states Mr. O'Connell.
